

## ROOF INFORMATION

**Wet & Forget**<sup>®</sup> is non-acidic, non-caustic and contains no bleach and will not damage any surface.

Here are a few tips for when you apply **Wet & Forget**<sup>®</sup> to your roof.

### **Black Mould**

The average 3 bedroom tile roof is approx 150-200sq mts, but because of the undulations of the tile profile the actual area is a lot bigger. Therefore an average tile/concrete roof would require 2 x 5 litre packs, depending on how porous the surface is and how much biological growth is present. For green moss and black mould one application is normally sufficient.

### **Lichen**

For an average 3 bedroom tile roof with lichen you would require 3 x 5 litre packs depending on the total area covered with lichen.

**For best results mix the Wet & Forget<sup>®</sup> and spot spray the lichen, leave for 10-15 minutes and then respray the lichen and the entire roof to ensure the lichen absorbs the Wet & Forget<sup>®</sup> thoroughly.** The first application is to dissolve the waxy surface. The 2<sup>nd</sup> spray will then penetrate the lichen.

### **Tank Water**

If your tank water is used for drinking, disconnect the water supply to your tank for at least 3-4 weeks or for the first 10mm of rain to avoid any chance of contamination. When raining check that the water flowing onto the ground is not foaming before reconnecting your water supply.

### **Instructions**

Simply dilute as per instructions on the bottle into a household garden sprayer or backpack sprayer.

If badly contaminated, apply a second application one month after the first.

**Wet & Forget<sup>®</sup>** is best applied in overcast dry conditions to avoid rapid evaporation.

Spray the affected area to the point of saturation. DO NOT hose off.

DO NOT apply if rain is expected within 6 hours.

### **Reaction Time**

The time it takes for an infested surface to become clean depends on the type and intensity of biological growth.

Black mould and Lichen will take 6-8 months and badly contaminated surfaces can take 12 months.

### **Safety**

Here at **Wet & Forget<sup>®</sup>** we always promote safety first so always ensure that you are safely harnessed to your roof and never walk on the section you have just sprayed as it will be slippery until it is dry.

### **Plants**

**Wet & Forget<sup>®</sup>** is not systemic or hormone based and is safe around plants, however a slight discolouration may occur if allowed to dry on the leaves of delicate plants. To avoid this, simply mist surrounding plants with water, before and after spraying **Wet & Forget<sup>®</sup>**
